Nov. 14 2022

Utilisation du DNS pour l'optimisation d'infrastructure et services IoT"

Sandoche BALAKRICHENAN

Internet made in France

Presented at ENE5AI 2022

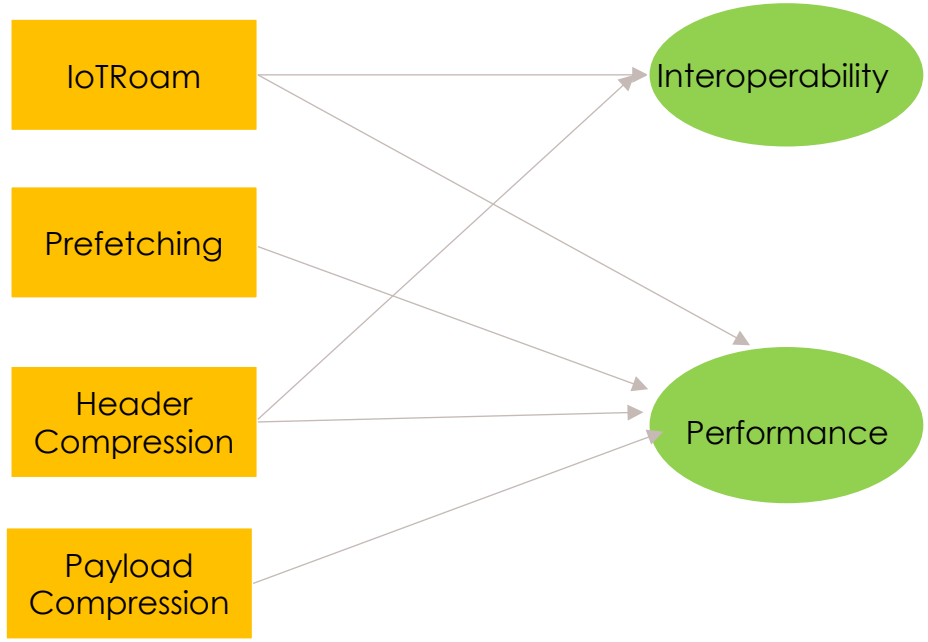

afnic | Labs

Summary

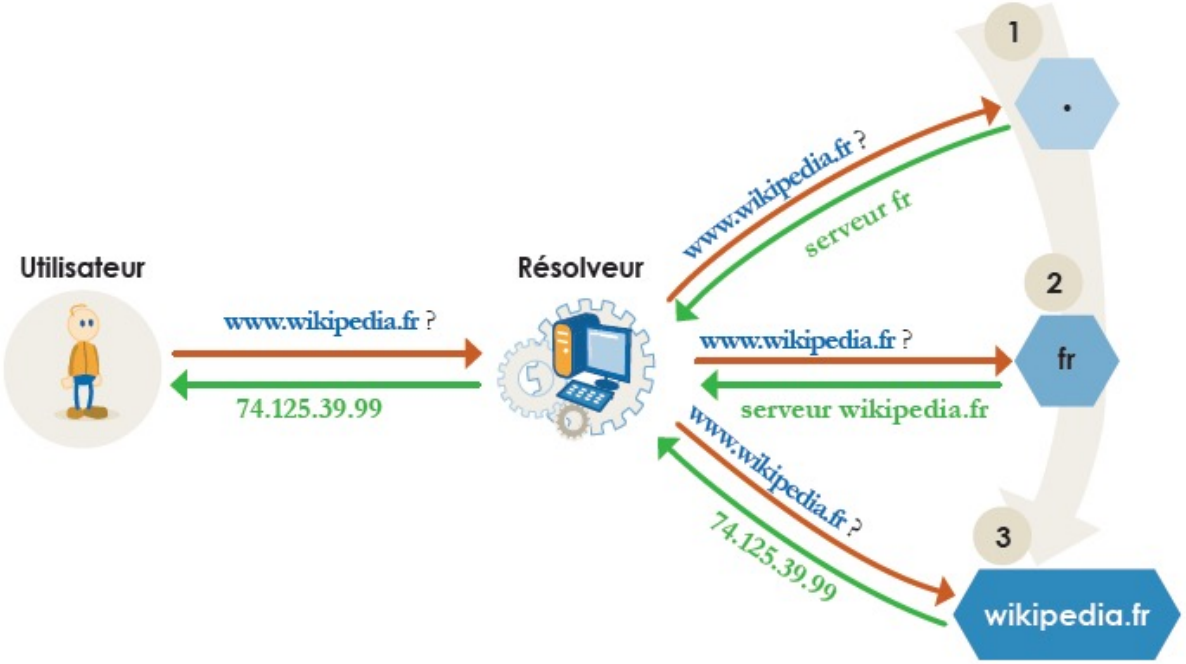

- **Interoperability and device mobility**
  - Building a Roaming Federation
  - Prefetching DNS information
- **Performance challenges**
  - Compressing Headers
  - Minimize network traffic
- **Afnic Vision**

afnic | Labs

Two main focus points

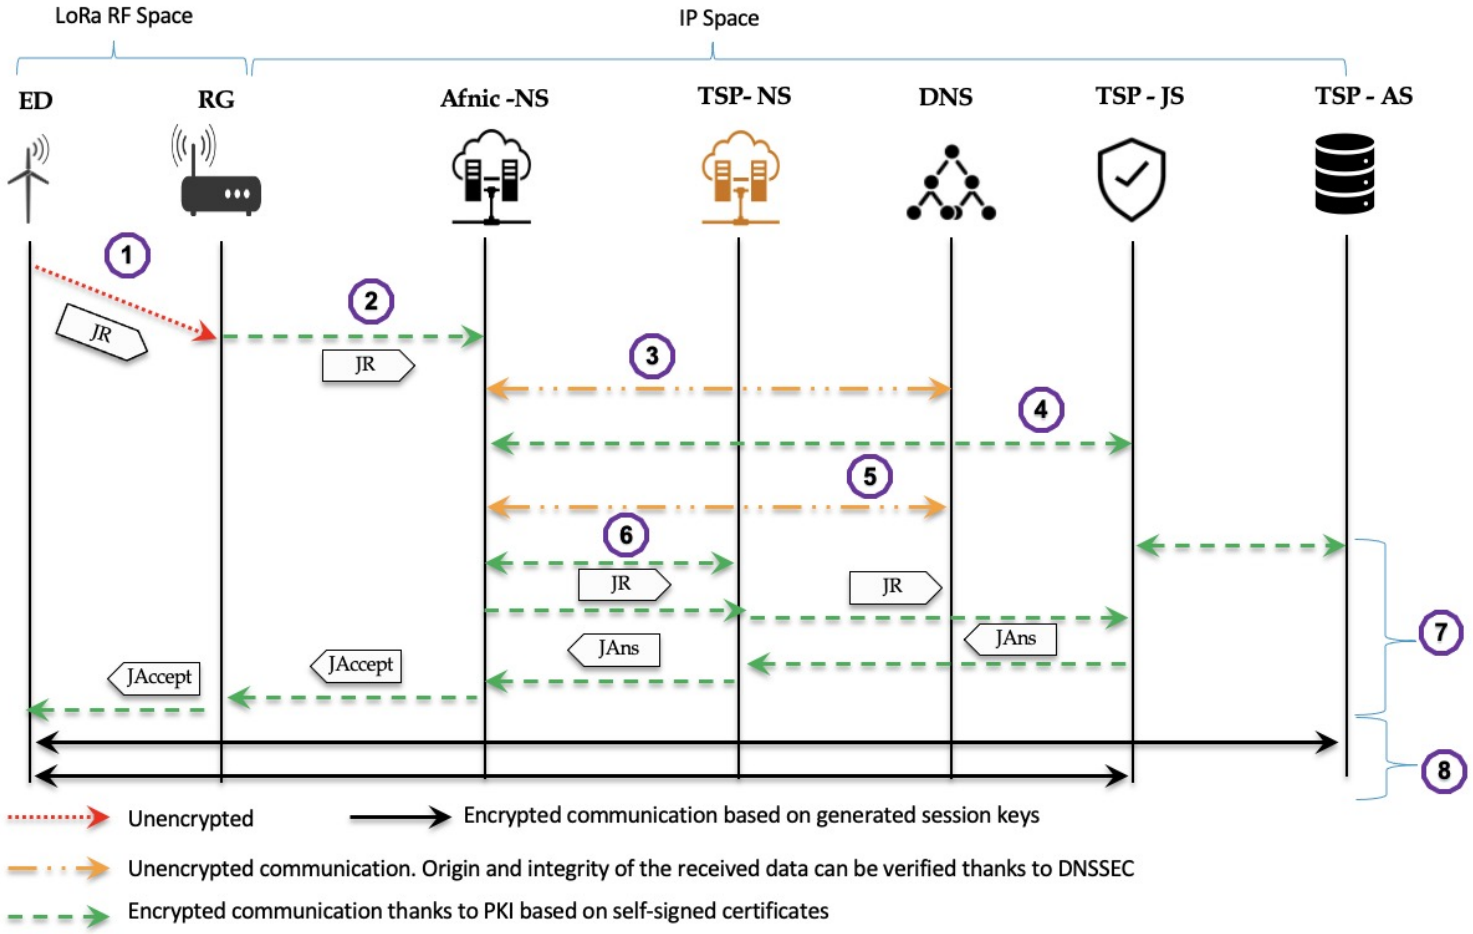

afnic | Labs **DNS**

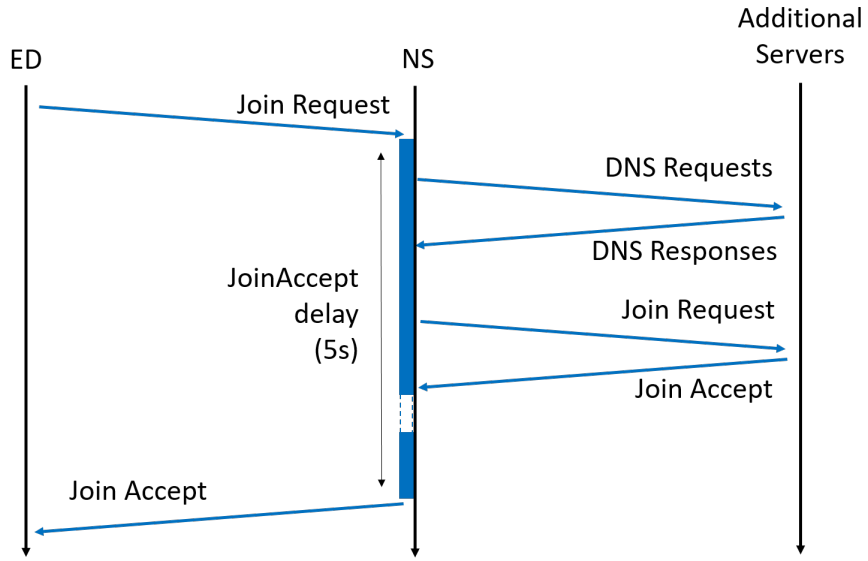

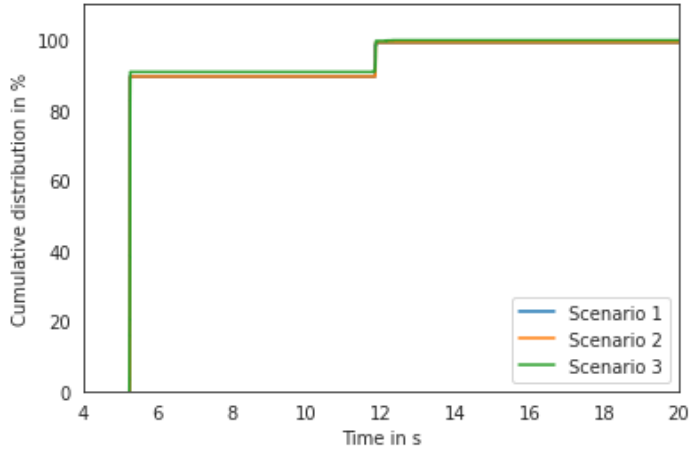

Enabling Interoperability

IoTRoam – LoRaWAN Roaming

Does DNS resolution add latency?

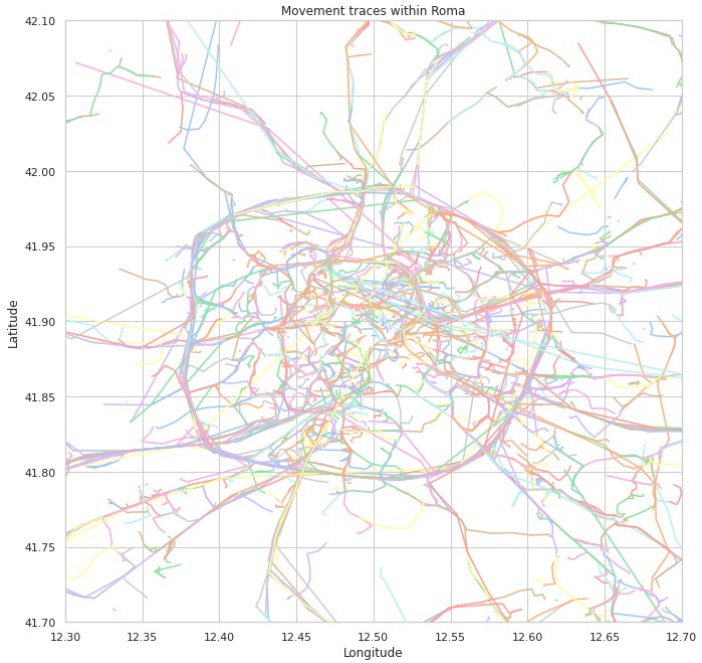

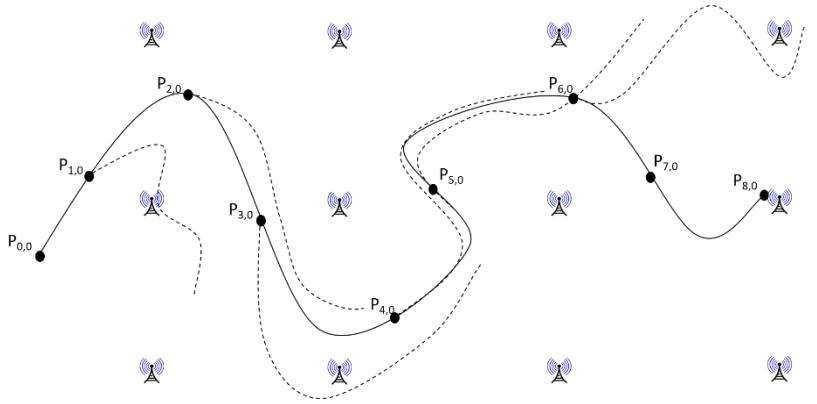

- **1. No Roaming**
- **2. Passive Roaming**
- **3. Passive Roaming with additionnal encryptions**

Improving IoT Device mobility – DNS Prefetching

Methodology - Traces

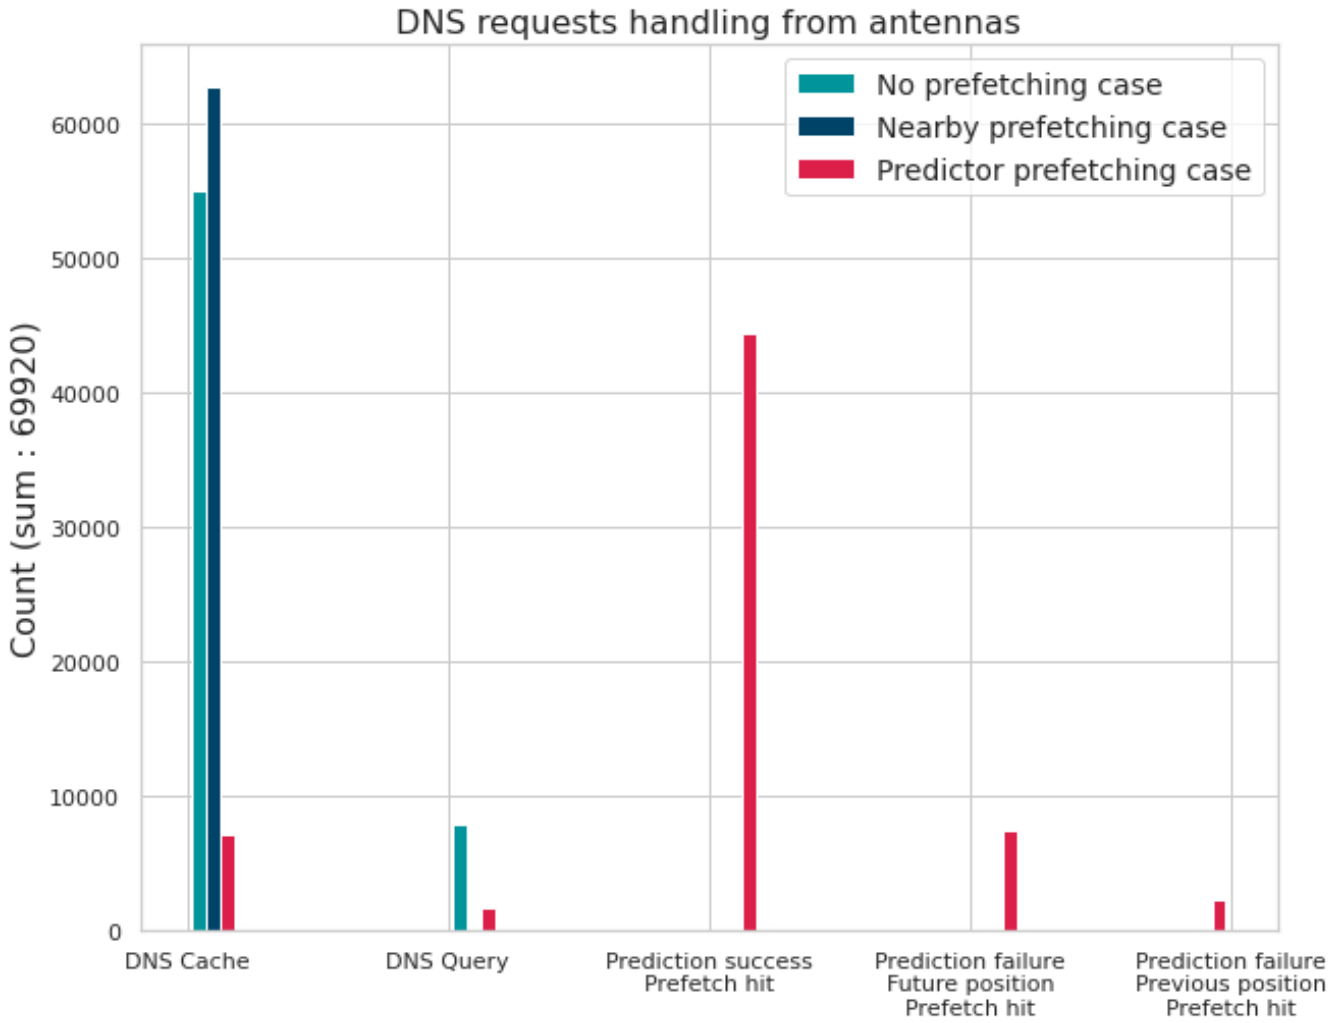

Methodology - Scenarii

3 SCENARII

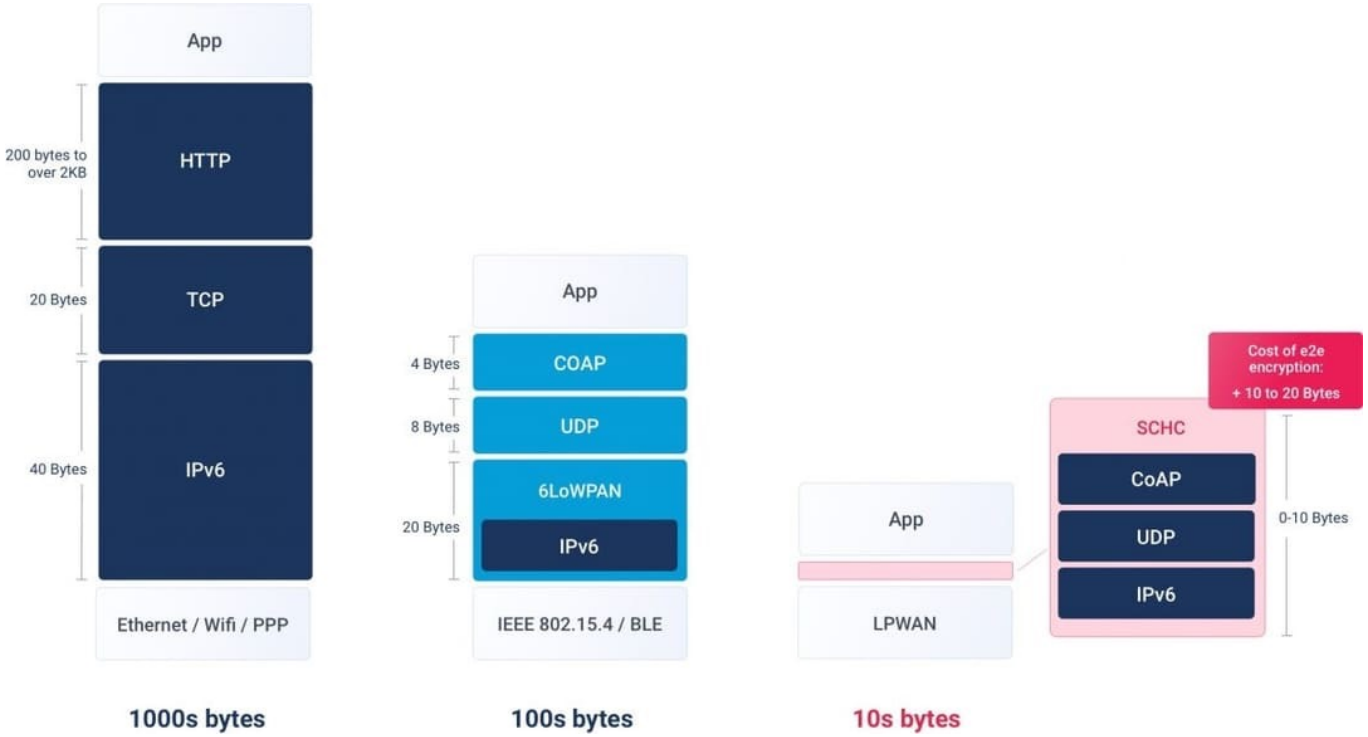

- No DNS Prefetching
- DNS prefetching on nearby gateway
- DNS prefetching using ML predictor

Results

DNS requests handling from antennas
No prefetching case
Nearby prefetching case
Predictor prefetching case
Count (sum : 69920)
0
10000
20000
30000
40000
50000
60000
DNS Cache
DNS Query
Prediction success
Prefetch hit
Prediction failure
Future position
Prefetch hit
Prediction failure
Previous position
Prefetch hit

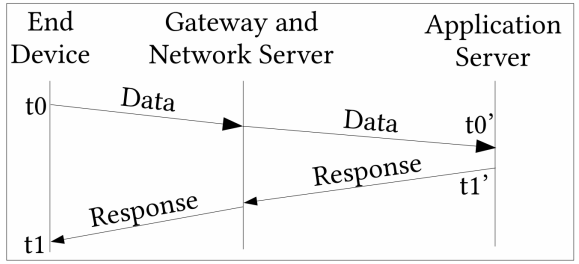

Compression – Header Compression

Why Compress Headers?

1000
Time in ms
Application Server Response Time without decompression
Application Server Response Time local context
Application Server Response Time http requested context
Application Server Response Time dns queried context

Compression – Payload Compression

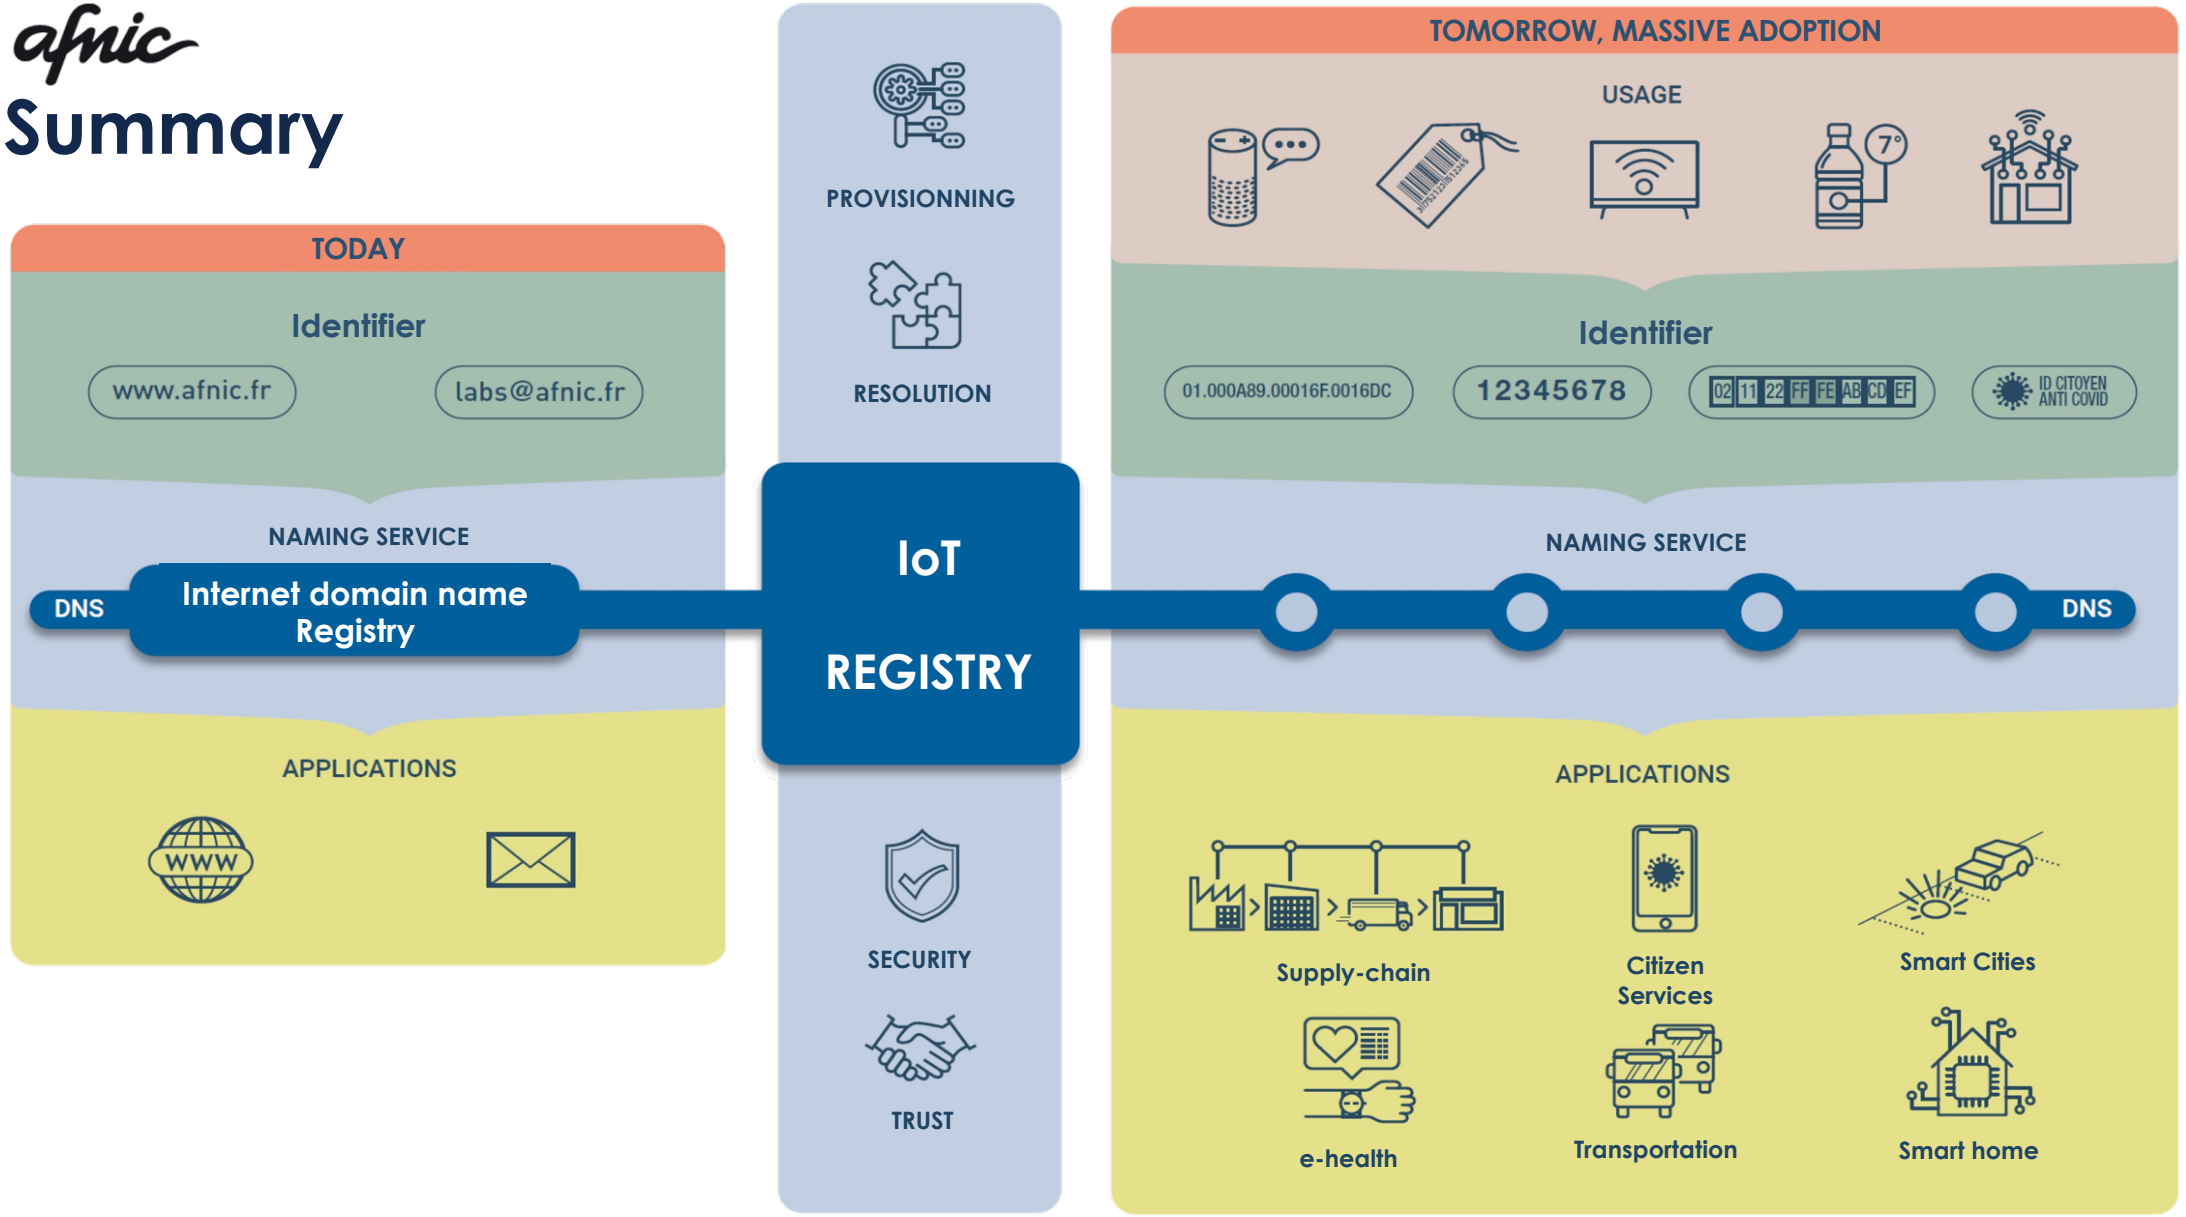

Experimental Setup

Results

MAPE ratio (in %) - Curves below
Compression Ratio (in %) - Curves above
Transmission decision threshold
(in % of error between prediction and actual data)
MAPE - Dataset 1
MAPE - Dataset 2
Compression Ratio - Dataset 1
Compression Ratio - Dataset 2
